

**LESSON**  
**6•4****Counting Triangles**

Look at the large triangle below.

How many small triangles make up the large triangle? \_\_\_\_\_

How many triangles can you find all together? \_\_\_\_\_

(*Hint:* Look for different-size triangles that are made from smaller triangles.)

You might want to trace every triangle you find with a different color. (You don't have to trace the small ones or the largest one.) You can keep count by seeing how many colors you use.
